

ABSTRACT

A liquid transfusing tube and a liquid transfusing tube set in which a liquid transfusing line (a liquid transfusing route) can be extended readily and quickly. The liquid transfusing tube (3a) comprises a flexible tube (31) constituting the liquid transfusing channel, a connector (a branch tube) (32) provided at one end part (distal end) of the tube (31), and a pointed bottle needle (35) provided at the other end part (proximal end) of the tube (31) and being connected to the side of a liquid transfusing bag (4) containing a liquid being transfused. A roller klemme (33) and a drip tube (34) are provided in the middle of the tube (31). The connector (32) has two female connectors (321, 322), a male connector (323), and an operating lever (324) and the communication pattern between the inner cavity of the female connector (321) and that of the female connector (322) or that of the male connector (323) can be selected by means of the operating lever (324).
